

If your building solution could talk, what would it say? Achieve optimal, affordable and effective operational synergy with IoT.nxt[®]'s market-changing IoT solutions. Resolve your business challenges through our world-class innovation which allows your sites to communicate clearly to you, from anywhere, globally.

Business challenges

Our client offers IoT services to clients on a "Software as a Service" Model. Leveraging our component framework, this client is able to deploy IoT in an easy, affordable package with pre-built use cases.

Our client wasn't able to integrate all sub-systems and devices into a single platform to bridge the gap between ring-fenced systems and visualizing an entire operation centrally with aggregated data from all operations.

The IoT.nxt[®] solution

We provided a platform to integrate all data centrally. The turnkey, white-labelled IoT solution focuses on the Facilities and Building Management sector.

Web-based, this solution was built specifically with scalability in mind.

Eco-system overview

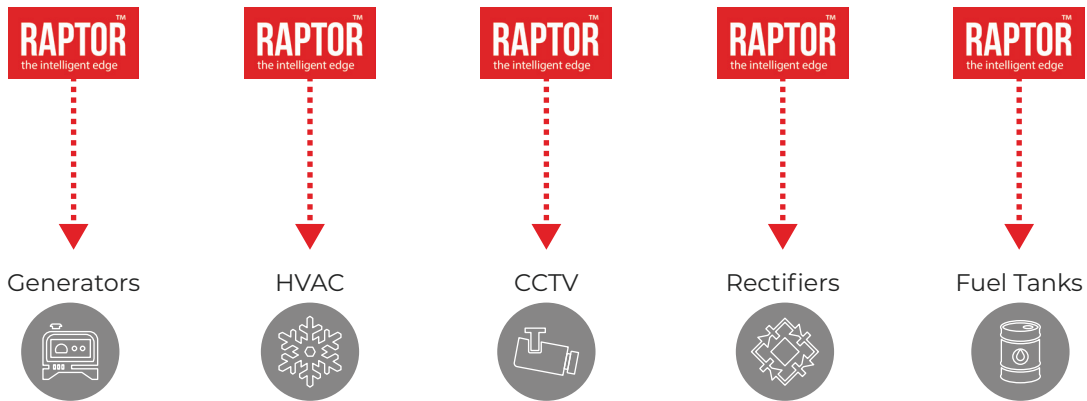

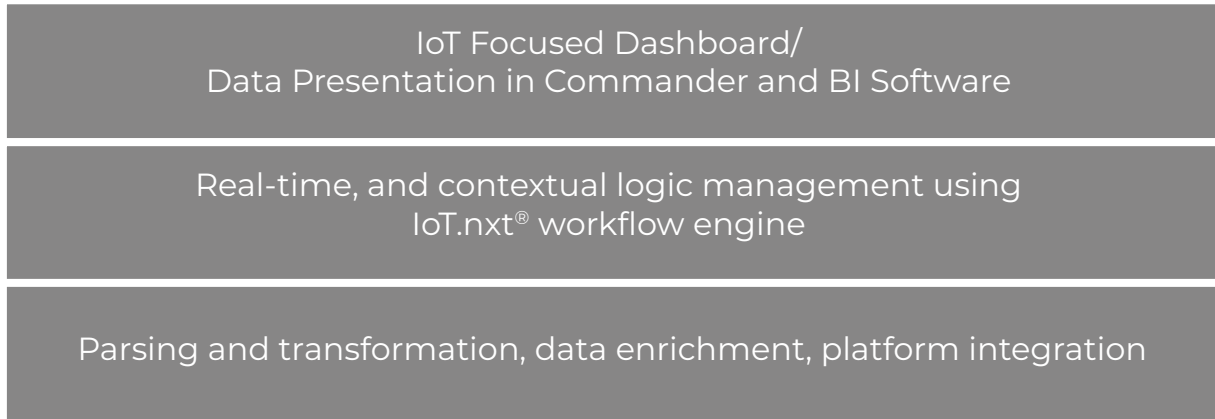

Areas of integration

- Electricity Meter Controllers
- Fire Panel – Smoke Detectors
- Generator
- HVAC Controllers
- Paradox intrusion alarm system via SDK
- Bosch VMS via SDK
- CEM access control system via API
- Asset management and ratbox data capture (using Sigfox network)
- Water meter pulse counters (using Sigfox network)
- UPS monitoring
- Meeting Room Occupancy System
- Service Desk

Optimizing your business eco-system needn't be complicated.

Solution benefits

By integrating all devices and systems into a single view, showing processes and building management, the client is able to utilize data to make more intelligent decisions on the edge as well as save costs on utilities.

Optimization - Boardroom occupancy monitoring and management.

Utility monitoring - More accurate, real-time data on the edge to decrease utility costs.

Productivity and efficiency - Making more intelligent decisions and utilizing resources better to save costs.

What makes our offer unique?

Rapid digitization

Intelligent filtering of data at the edge

Real-time in-shift optimization of operations

Integration of analog and digital, legacy and new devices

Quick implementation with no disruption, retrofitting our technology to create interoperability between new and legacy infrastructure and equipment

Consolidation of business-wide processes and data

Remote monitoring and management of businesses
